

Juan Pablo Hoyos Castedo

Fayetteville, AR | jh306@uark.edu | [linkedin.com/in/juan-pablo-hoyos-castedo-850846247](https://www.linkedin.com/in/juan-pablo-hoyos-castedo-850846247)

Finance student with a financial analytics concentration, splitting time between quantitative coursework, academic support for Razorback student-athletes, and hands-on sales & consumer-behavior work built across three internships in Santa Cruz, Bolivia. Recently helped design a proposed retail concept for a Fortune 10 company, projected to cut wait times 87.5% if adopted, and shipped a live Python portfolio-optimization app — Sharpe/Sortino, correlation, Markowitz efficient frontier — from a financial analytics class.

EDUCATION

University of Arkansas, Sam M. Walton College of Business — Fayetteville, AR Expected Dec. 2026
B.S.B.A. in Finance, Financial Analytics Concentration | GPA 3.5
Relevant coursework: Financial Data Analytics II — applied statistical and database methods to real financial datasets, the foundation for the Portfolio Tracker App below.

EXPERIENCE

Learning Assistant — Office of Student-Athlete Success, University of Arkansas May 2026 – Present

- Host study halls for the football and baseball programs, overseeing attendance and monitoring student-athletes' academic progress.
- Provide one-on-one tutoring across business courses (1000–4000 level, including Finance, Accounting, Management, and Economics) and Programming Fundamentals.
- Contributed to the football program posting a 3.27 cumulative GPA in Spring 2026 — the highest in program history — through structured study hall support.
- Collaborate with academic coordinators and coaching staff to track student progress and flag at-risk students.

Academic Tutor — Office of Student-Athlete Success, University of Arkansas Jan. 2025 – May 2026

- Provided one-on-one tutoring for student-athletes across business courses (1000–4000 level) and Programming Fundamentals, building problem-solving strategies and study techniques.
- Collaborated with university faculty and staff to ensure academic progress and success.

Stock Management Intern — TeLoCompro Bo, Santa Cruz, Bolivia Jan. – Mar. 2024

- Managed and registered a full inventory of 2,000 products for the app.
- Analyzed consumer behavior, segmenting 300 customers into 4 different groups.
- Successfully recovered more than 50 previously lost customers.

Sales & Product Intern — EnviosPet, Santa Cruz, Bolivia Feb. – Jul. 2023

- Recruited back by the company for a second internship following strong 2022 performance, to support the launch of a new SaaS platform.
- Collaborated directly with the company's CEO, CFO, and CTO on the platform's UI/UX, and sold the resulting product to 25 veterinary centers across Bolivia and Paraguay.
- Trained 20 business owners with no prior software or computer experience, increasing company profits by 20,000 Bs and driving 5,000 Bs in average monthly profit.

Sales and Customer Analysis Intern — EnviosPet, Santa Cruz, Bolivia Feb. – Aug. 2022

- Conducted a study on over 500 customers, categorizing them by consumer behavior.
- Re-engaged and recovered 80 lost customers.
- Led a co-marketing campaign with 50 local restaurants and businesses.

PROJECTS

Sam's Club Design Team — Team Member — McMillon Innovation Studio, Walton College of Business Jan. – May 2025

- Designed "Return & Go," a redesigned Sam's Club service-desk return experience projected to cut return-process wait times by 87.5% while preserving associate-member interaction.
- Contributed to customer discovery, research, and prototyping as a team member — the core design challenge was cutting wait time without losing the associate-member interaction that drives loyalty, which shaped every iteration of the concept.
- Selected as a Demo Day finalist team for the proposed solution.

Portfolio Tracker App — Class Project, Financial Data Analytics II Spring 2026

- Built and deployed a portfolio analytics web app in Python (Streamlit) computing risk-adjusted returns (Sharpe, Sortino), rolling volatility and drawdowns, and full correlation-covariance matrices across a multi-asset portfolio.
- Implemented Markowitz portfolio optimization (Global Minimum Variance, Tangency, Efficient Frontier) with per-asset risk-contribution decomposition, a custom portfolio builder (interactive weight sliders), and estimation-window sensitivity analysis.
- Used VS Code, Git/GitHub, and AI coding tools (ChatGPT, Claude, Gemini) throughout development — live at juanpablohoyosc-portfolio-app.streamlit.app

"Que Planes?" — Entrepreneurship Final Project Nov. 2023

First Place — beat 6 competing teams, awarded an academic scholarship

- Designed the business and financial structure for the future development of an entertainment app named "Que Planes?"
